EDUCATION

University of Florida, *Gainesville, FL* — *Expected May 2027*
Master of Science (M.S.) in Computer Science
GPA: 3.83/4.0

University of North Florida, *Jacksonville, FL* — *May 2025*
Bachelor of Science (B.S.) in Computer Science, Minors in Mathematics and International Business
GPA: 3.99/4.0

WORK EXPERIENCE

Florida Blue — *May 2026 - Present*
Information Technology Intern
• Developing a Streamlit application to orchestrate data validation across a large-scale migration pipeline, reducing manual configuration and improving coordination between business and technical teams.
• Designing and implementing a modular FastAPI backend with Pydantic and SQLAlchemy, supporting efficient processing of 700k+ database records across multiple tables.

UF Information Technology — *Jan 2026 - Present*
Research Computing Support Intern
• Developed a Python CLI and Django-Ninja API for querying 800M+ rows of Lmod data on HiPerGator, enabling quick analysis of software usage by research computing staff.
• Containerized and deployed the API and PostgreSQL database using Podman Quadlet, implementing JWT-based authentication for secure access.
• Optimized query performance using nightly precomputed tables, reducing latency from minutes to milliseconds.

Avondale United Methodist Church — *Aug 2019 - Jun 2025*
Volunteer Web Developer
• Designed, coded, and maintained the church website using HTML, CSS, JavaScript, and PHP, serving 50+ members.
• Implemented a pictorial directory, migrating hand-collected forms to 20+ member entries using server-side scripting.

PROJECTS

UF Marketplace
• Led backend development of a full-stack marketplace using Go (Gin), building a REST API with JWT-based auth.
• Designed and indexed relational schemas with GORM (SQLite), optimizing query performance for listings and user data.
• Engineered cursor-based pagination for listings, improving scalability and reducing query latency for large datasets.

MoTorch Neural Network Library
• Built a PyTorch-inspired deep learning framework with neural network modules, optimizers, and loss functions.
• Implemented a reverse-mode autodiff engine using dynamic computational graphs for backpropagation.
• Leveraged NumPy's dispatch protocol to integrate optimized vectorized operations within a custom tensor API.

AeroAtlas Travel Planner
• Built a full-stack travel itinerary planner using Agile methodologies, Next.js, Supabase, and ShadCN components.
• Integrated third-party APIs with FastAPI, using in-memory caching to reduce latency and improve response times.
• Won the Audience Choice Award at the 2025 UNF School of Computing Symposium against 20+ teams.

SKILLS

• Languages: Python, Go, Java, C, HTML/CSS, SQL, TypeScript
• Frameworks: Django/Ninja, FastAPI, Gin, Gorm, PyTorch, Scikit-Learn, Gymnasium, Ray RLlib
• Tools/Infra: Docker/Podman (Quadlet), Linux, PostgreSQL, HPC, Git, Jira

AWARDS/CERTIFICATIONS

• Building Transformer-Based Natural Language Processing (NLP) Applications, *NVIDIA*
• 2nd place out of 50 teams, Fall 2024 UNF NestforAwhile Programming Challenge
