EDUCATION

University of Florida, *Gainesville, FL* *Expected May 2027*
Master of Science (M.S.) in Computer Science
GPA: 3.83/4.0

University of North Florida, *Jacksonville, FL* *May 2025*
Bachelor of Science (B.S.) in Computer Science, Minors in Mathematics and International Business
GPA: 3.99/4.0

Sungkyunkwan University, *Seoul, South Korea* *Feb 2024 – Jun 2024*
Semester Exchange Program in Data Science and Generative AI Applications

WORK EXPERIENCE

Florida Blue *May 2026 – Present*
Information Technology Intern – Software Engineering
- Built a React/FastAPI application, improving operational efficiency by 8 hours for a 30k+ record healthcare migration.
- Designed backend services with SQL Server locking and SQLAlchemy pooling for sub-100ms concurrent API responses.
- Enforced REST API design via Pydantic validation and modularity, verified with pytest and SQLite unit/network testing.
- Translated requirements into Agile user stories, wrote system design documents, and presented to senior leadership.

UFIT Research Computing *Jan 2026 – Aug 2026*
Research Computing Support Intern
- Streamlined querying of 800M+ HiPerGator usage records via a Python CLI and Django REST API in production.
- Containerized and deployed the API and database with Podman Quadlet, securing endpoints with RS256 JWT auth.
- Reduced long-running queries from minutes to milliseconds via PostgreSQL query analysis and nightly Slurm ETL jobs.
- Supported 3700+ users across Linux nodes, debugging HPC apps and tracking work via Jira, Confluence, and Slurm logs.

PROJECTS

UF Marketplace
- Engineered real-time messaging in Go using WebSockets and concurrent client read/write goroutines.
- Replaced database blobs with scalable cloud-based object storage by integrating AWS S3 with a Gin REST API.
- Designed and indexed relational schemas with GORM and SQLite for listings, messaging, and user workflows.

MoTorch Neural Network Library
- Built a PyTorch-inspired deep learning framework with neural network modules, optimizers, and loss functions.
- Implemented a reverse-mode autodiff engine using a dynamic computational graph for backpropagation.
- Automated linting, unit, and end-to-end testing with GitHub Actions, using uv for modern package tooling.

AeroAtlas Travel Planner
- Created a full-stack travel itinerary planner using Agile methodologies, Next.js, Supabase, and ShadCN components.
- Integrated third-party APIs with FastAPI, using in-memory caching to reduce latency and improve response times.
- Won the Audience Choice Award at the 2025 UNF School of Computing Symposium against 20+ teams.

SKILLS

Languages: Python, Go, C++, Java, TypeScript, SQL
Libraries/Frameworks: FastAPI, Django, Gin, React, PyTorch, NumPy, Scikit-Learn, Ray RLlib
Cloud/Infrastructure: AWS S3, Podman, Linux, Slurm, GitHub Actions, systemd
Data/Tools: PostgreSQL, SQL Server, SQLite, Git, GitHub, Jira, Confluence
AI Tools: Codex, ChatGPT, Claude, Gemini
