EDUCATION

University of Florida, Gainesville, FL

Expected May 2027

Master of Science (M.S.) in Computer Science

GPA: 3.83/4.0

University of North Florida, Jacksonville, FL

May 2025

Bachelor of Science (B.S.) in Computer Science, Minors in Mathematics and International Business

GPA: 3.99/4.0

Sungkyunkwan University, Seoul, South Korea

Feb 2024 – Jun 2024

Semester Exchange Program in Data Science and Generative AI Applications

WORK EXPERIENCE

Florida Blue

May 2026 – Present

Information Technology Intern (SWE)

- Built a full-stack administrative interface with Streamlit and FastAPI (Python), enabling nine teams to coordinate data migration and validation efforts, saving hours of manual configuration and reducing communication delays.
- Designed a REST API using Pydantic for data validation, SQLAlchemy for connection pooling, and SQL Server transaction locking for safe, concurrent access of shared data by multiple clients, achieving response times under 100ms.
- Translated business requirements into Agile user stories, implemented interfaces aligned with company design standards, and validated application quality through Pytest unit testing and Ruff linting.

UFIT Research Computing

Jan 2026 – Aug 2026

Research Computing Support Intern

- Developed a Python CLI and Django-Ninja REST API for querying 800M+ rows of Lmod data on the University of Florida supercomputer, HiPerGator, allowing research computing staff to analyze software usage across the cluster.
- Containerized and deployed the API and PostgreSQL database to production using Podman Quadlet to manage containers as systemd units, securing endpoints with asymmetric RS256 JWT-based authentication.
- Automated nightly data precomputation via Slurm cron jobs, reducing query latency from minutes to milliseconds.

Avondale United Methodist Church

Aug 2019 – Jun 2025

Volunteer Web Developer

- Designed, coded, and maintained the church website using HTML, CSS, JavaScript, and PHP, serving 50+ members.
- Implemented a pictorial directory, migrating hand-collected forms to 20+ member entries using server-side scripting.

PROJECTS

UF Marketplace

- Led backend development of a full-stack marketplace with Go (Gin), JWT auth, and real-time WebSocket messaging.
- Integrated AWS S3 object storage, replacing database blobs with scalable cloud-hosted image storage.
- Designed and indexed relational schemas with GORM (SQLite), optimizing query performance for listings & user data.

MoTorch Neural Network Library

- Architected a PyTorch-inspired deep learning framework with neural network modules, optimizers, and loss functions.
- Implemented a reverse-mode autodiff engine using a dynamic computational graph for backpropagation.
- Leveraged GitHub Actions to facilitate linting and unit/e2e testing in a CI pipeline and uv for fast package builds.

AeroAtlas Travel Planner

- Created a full-stack travel itinerary planner using Agile methodologies, Next.js, Supabase, and ShadCN components.
- Integrated third-party APIs with FastAPI, using in-memory caching to reduce latency and improve response times.
- Won the Audience Choice Award at the 2025 UNF School of Computing Symposium against 20+ teams.

SKILLS

- Languages: Python, Go, Java, C, C++, HTML/CSS, SQL, TypeScript
- Frameworks: FastAPI, Django, Django-Ninja, Gin, GORM, PyTorch, Scikit-Learn, Gymnasium, Streamlit
- Tools/Infra: Linux, OpenAI Codex, Podman (Quadlet), Slurm, Git, Jira, UV, GitLab, GitHub, AWS S3
