EDUCATION

University of Florida, *Gainesville, FL* *Expected May 2027*

Master of Science (M.S.) in Computer Science

GPA: 3.83/4.0

University of North Florida, *Jacksonville, FL* *May 2025*

Bachelor of Science (B.S.) in Computer Science, Minors in Mathematics and International Business

GPA: 3.99/4.0 | *Summa Cum Laude* | Hicks Honors College

EXPERIENCE

Florida Blue, *Remote* *May 2026 – Present*

Information Technology Intern – Software Engineering

- Created and improved **28 REST API endpoints** in FastAPI and Spring Boot serving React UIs, tested with PyTest.
- Aggregated data across **8 tables** and **2 databases** with SQL and Java for enterprise data-driven applications.
- Built a React dashboard to visualize migration failure metrics, accelerating root-cause analysis by engineering teams.
- Supported CI/CD with GitLab, Jenkins, and OpenShift; wrote Agile user stories in Rally and system documentation.

UFIT Research Computing, *Gainesville, FL* *Jan 2026 – May 2026*

Research Computing Support Intern

- Built and deployed a Python CLI and Django REST API to analyze metrics for **800M+ software usage records.**
- Resolved **30+ HPC issues** for HiPerGator users via root-cause analysis, including an **8-month backlog** Jira ticket.
- Decreased long-running query latency by **10–30×** by caching read-heavy filesystem data in PostgreSQL tables.
- Automated nightly data ingestion through Slurm cron jobs and containerized production applications with Podman.

RESEARCH

IEEE ICTAI 2026 - *Scalable Multi-robot Coverage with Connectivity Maintenance Via Deep Reinforcement Learning*

J. Corrieri, I. Kulbaka, A. Ghosh, A. Dutta

- Simulated up to 50 autonomous robots in Python and Gymnasium, achieving **5x more scalability** than prior work.
- Developed a decentralized CNN model with PyTorch, resulting in **15% greater area coverage** compared to the baseline.

PROJECTS

MoTorch Neural Network Library *Apr 2026 – Jul 2026*

- Created a PyTorch-inspired deep learning framework with neural network modules, optimizers, and loss functions.
- Implemented an automatic forward pass and backpropagation, enabling users to build and train arbitrary models.
- Automated CI and testing with GitHub Actions and PyTest, benchmarking models with up to **32.6 million parameters**.

UF Student Marketplace *Feb 2026 – Jul 2026*

- Engineered a full-stack marketplace with Angular (TypeScript) and Go, using WebSockets for real-time messaging.
- Integrated AWS S3 into a Gin REST API via a least-privilege IAM role, replacing direct uploads for scalability.
- Designed relational schemas and indexes with GORM and SQLite for listings, messaging, and user auth flows.

SKILLS

Languages: Python, C++, Go, Java, TypeScript, SQL

Libraries: FastAPI, Django, Gin, Spring Boot, React, CUDA, PyTorch, NumPy, Gymnasium

Infra: Linux, Git, GitHub Actions, GitLab, Podman, PostgreSQL, SQLite, AWS S3, Jenkins, OpenShift, Jira, Confluence
